José David Gómez

Interactive Media Designer

I'm highly visionary who things that we can generate an **impact** into **people lives** by taking advantage of **networking** and the better way to do it is designing it. That's why me more inmersed are **UX/UI design**, **Web design** and also **illustration**. I also was involved in many innovation projects and development of a design event.

We both are going to build experiences that enhance the user's vision of your product:
It doesn't matter what is it, what really matters it's how they feel

All roads lead to Rome

Doesn't matter **how many** of them there are, what it's important is that we must to find out the **better one**, that's why I'm always looking for it and I'll make sure you will **get it right** too.

It may sound so fairy-taly, but it is important to think for the possibility of a **better world**. We can think for many ideas that can **improve** not only for the company itself but for **users themselves** too.

After all we are designing for them, aren't we?

I always go further showing the **best of yourself** where most people will follow you: **the internet**. It's is important to think how are you going to **show yourself** to them, *let me give you a hand with no doubt*.
